

AlarmBiller Release Notes

September 2023

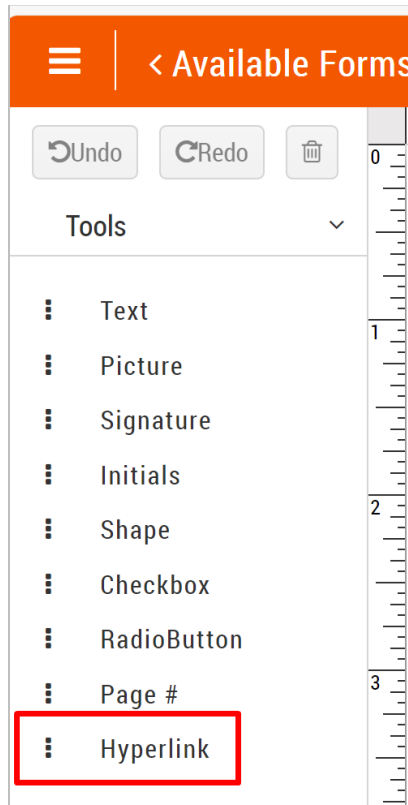

Version 4.46.1

AlarmBiller®

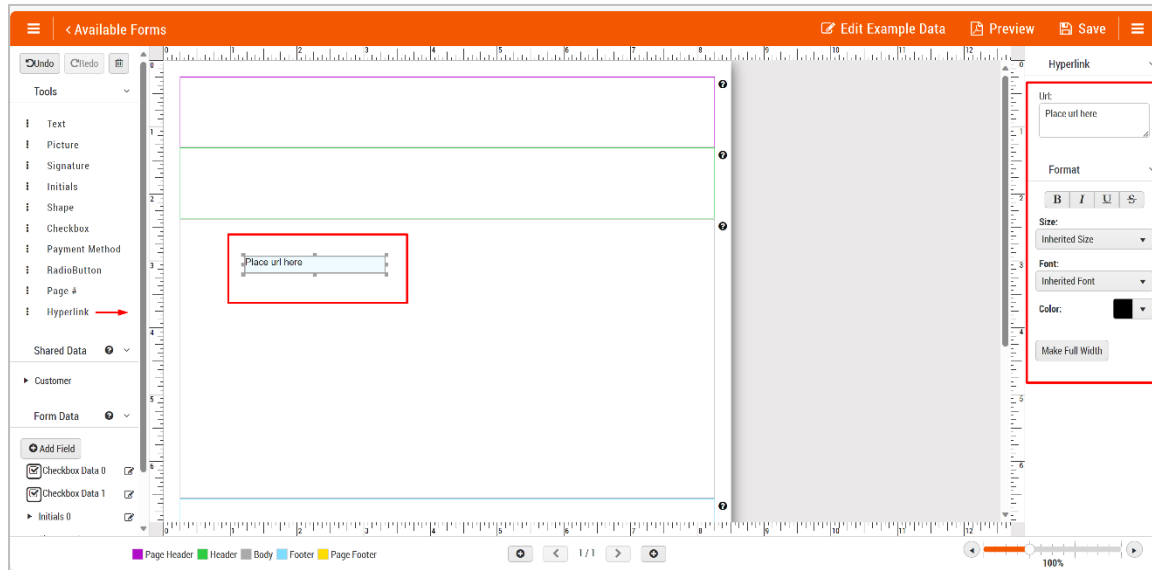

Enhancements/Features

36501 | eForms Signing Page Hyperlink Support

The eForms signing page now supports hyperlinks. We added an eForms design element so users can add clickable hyperlinks in the body of an eForms document.

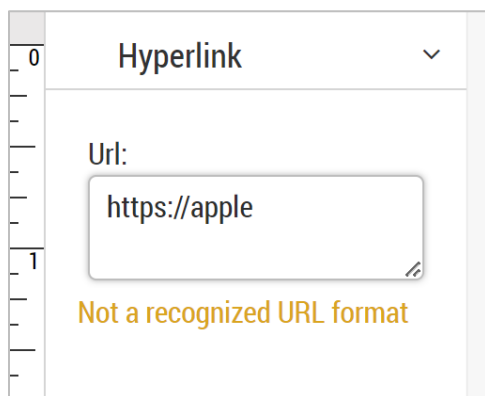

When users drag and drop the element on the eForms designer, the Hyperlink element opens an edit menu so they can enter the URL and format the font for the hyperlink.

When a user is adding or editing a URL string, the hyperlink edit menu compares the entered URL string against commonly recognized URL patterns and presents a message if the entered string does not match these URL patterns.

For example:

An unrecognized URL format can be saved. It is the template designer's responsibility to validate that the URL is correct and will successfully navigate to the correct web page.

Any hyperlink elements become clickable URLs on both the eForms signing page and the PDF files. If a recipient clicks the hyperlink on the eForms signing page a new browser tab will open. If they click it from the PDF, it will open in the same browser tab.
