

Managely Release Notes

October 2024

Version 5.3.41.41 **INTERNAL COPY**

MANAGELY®

Application Corrections

53011 Invoice duplication on concurrent RMR jobs [00121455]

Two RMR jobs could run at the same time, which was creating double invoices. We resolved this by ensuring that all calls to lock records have the proper wait time.

Internal Changes (not on customer release notes)

53414 SyncGL Unbalance only filtering incorrectly

The issue was we were not summing the Details and verifying if they were balanced so the filter would miss some invoices.

To resolve this issue, we updated the out-of-balance condition to include a check for the the sum of CreditAmount minus DebitAmount in detail and introduced the ids variable to filter active entities, project them to GLJobEntityViewModel, apply the out-of-balance condition, and select their IDs in a single query.
