53539 New Bill from Purchase order cannot be saved	32
53540 Save Button not active on Add Invoice Item	32
53548 Vendor Receipt allocation filtering.....	33
53596 Branch Column showing on Essentials	33

Enhancements

Proposals, Departments, and Approval Rules

49151 & 47845 Departments

We added a Departments page (CRM > Departments) to use with approval rules and proposals. Use this page to create, edit, and delete departments, and add and remove salespeople, managers, and approvers to the departments.

Name	# of Sales Team Members	# of Managers		
II	2	0	Edit	Delete
Sales	4	1	Edit	Delete
Secondary Sales	1	1	Edit	Delete
Support	2	0	Edit	Delete
Test	17	0	Edit	Delete

In the grid, columns show the department name, number of salespeople in the department, and the number of managers. There is an Edit button and Delete button in each row to change or delete the department.

Note: Deleting a department that has salespeople makes it inactive (users can reactivate it later). Deleting a department that has no salespeople deletes the department.

How to Add a Department

Click the **Add Department** button.

The screenshot shows the 'Create Department' interface. It includes a title bar with navigation and action buttons, followed by input fields for 'Department Name' and 'Description'. Below these are tabs for 'Sales Team', 'Managers', and 'Approvers'. The 'Sales Team' tab is selected, showing a '+ Add Sales Persons' button and a table with no records.

Type a **Department Name**. (Required)

Type a **Description** for the department.

On the Sales Team tab, click the **Add Sales Persons** button. This opens a popup showing all employees who are linked to users.

The 'Add Employees' popup window displays a search bar and a table of employees. The table has columns for 'Image', 'Name', and 'Email'. A single row is shown with a checkbox, an image icon, the name 'test, VBV', and the email 'TEST@TES'.

Image	Name	Email
<input type="checkbox"/>	test, VBV	TEST@TES

Select the checkbox at the left of each row for each employee. When finished, click the **Add Employees** button at the bottom.

On the Managers tab, click the **Add Managers** button. This opens a popup shows employees who can be selected as a manager. These are employees who are linked to an Admin user.

Select the checkbox at the left of each row, for each employee. When finished, click the **Add Employees** button at the bottom.

On the Approvers tab, click the **Add Approver** button. This opens a popup to select proposal approvers:

Select an **Employee** to be a proposal approver. (Required) This is an employee who is a salesperson that is linked to a user.

Select an **Approval Order** for the employee. (1 for the first approver, 2 for the second approver, etc.) (Required)

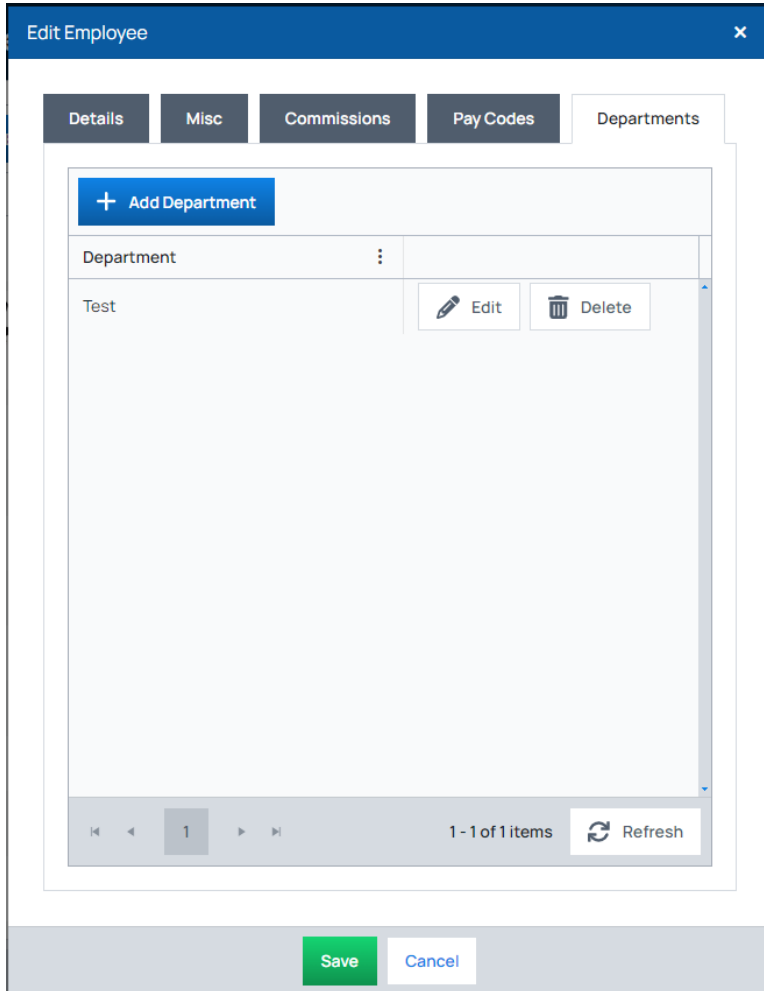

Click **OK** when finished.

Choose as many approvers as needed.

When finished with the Sales Team tab, the Managers tab, and the Approvers tab, save the department (click the **Save** button near the top right corner of the page).

51617 Department Linking from Edit Employees

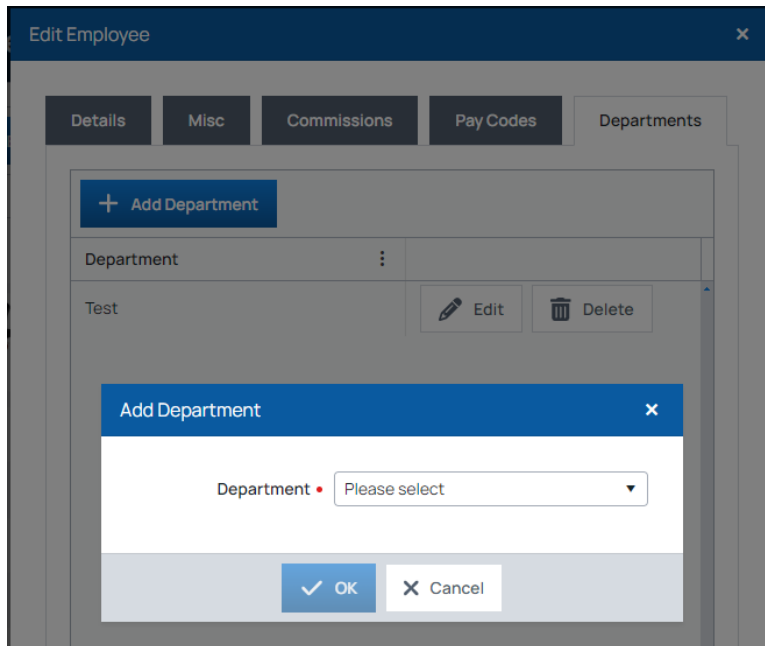

The Edit Employee form (Setup > Company > Employees) now has a Departments tab.

Use this to add, edit (change), or delete a department for the employee.

TIP: Changing the size of the Department column can change the width of the Edit Employee form.

Click the **Add Department** button to open the Add Department popup and select a department from the dropdown field. If there are no departments, this dropdown will be blank. Click **OK** to add the department to the employee.

Editing a department functions the same way.

An employee can be part of more than one department.

Use the Department tab on the Edit Employee form to add departments to an employee one at a time. Use the Departments page (CRM > Departments) to add a single or multiple employees to a department at a time.

47852 Department Linking for Proposals

On the Proposals page (CRM > Proposals), we added the **Department** field. Use this to link the proposal to a department. Proposals linked to a department that has an approval rule will go through the approval rule process.

The screenshot shows the 'Create Proposal #0' form. The 'Department' dropdown menu is highlighted with a red box. The form includes fields for List Price (\$0.00), Discount (\$0.00), Sales Price (\$0.00), Tax Total (\$0.00), Proposal Total (\$0.00), and RMR Total (\$0.00). Other fields include Status (Open), Proposal Type (Please Select), PO Number, Proposal Date (08/19/2024), Contact (Contact), Phone, Email (stephen.fisher@boldgroup.com), Follow Up (08/19/2024 20:03), Est Closing (08/19/2024), Est Closing % (0%), Source (Google), Site (Site 1 ABC (commercial) -1), System Type (Please Select), Sales Package, Sales Tax (None -3%), Term (Net 15), Service Level (SVC T&M COM), Salesperson (1 Unassigned), and Delivery Method (Email). A 'Brief Description' field is also present with a character count of 0/250.

51937 Configure Proposal Approval Feature in Setup

On the System Defaults page (Setup > Company > System Defaults) we added a switch called **Require Proposal Approval**:

The screenshot shows the 'System Defaults' page. The 'Require Proposal Approval' switch is highlighted with a red box. The page includes various settings such as Customer Type (Commercial), Residential/Commercial (Residential selected), System Type, Billing Cycle (Monthly), Default Term (Net 15), Recurring Term (Net 10), Service Invoice Term (Due on Receipt), Manual Invoice Term (Net 30 Days), Sales Tax (Ohio State Tax), Country (United States), Marketing Source (Google), Default Vendor (ADI - 1001), Customer Portal Work Order Type (Service Call (comm)), Customer Portal Work Order Status (New), Deposit Invoice Item (Deposit), Branch (Default 1), Require Vendor Part Link (YES), and Default Allowable Variance (0.00).

Set this switch to YES to use the proposal approval feature. Do not change this to NO if any proposals are pending approval; the edit button on the proposals will be disabled, and no one will be able to edit those proposals.

47844 Proposal Approval Rules

We added a page for proposal approval rules. Use this to define and maintain roles for approving proposals. There are two types of approval roles: general rules and user rules. General rules apply to all users company wide. User rules apply to specific users.

General Rules

1. To add a general rule, browse to the Approval Rules page. (Setup > Proposals > Approval Rules)

Approval Rules

General Rules | User Rules

A General Rule will be applied across the entire application. There are three parameters that can be utilized when creating a general rule: Departments, Amounts, and Proposal Types. A general rule can be created utilizing one or multiple parameters. When creating a general rule without selecting a parameter, the rule will be applied taking into account only the selected parameter(s).

Example: If a general rule is created with only a department selected and the amount and proposal type fields are left blank, all proposals created for that department will go through the approval process regardless of the amount or the proposal type on that proposal.

+ Add General Rule

Drag a column header and drop it here to group by that column

Department	Amount	Proposal Type	
Test2	\$1.00		Edit Delete

1 | 1 - 1 of 1 Items | Refresh

- Click the **Add General Rule** button to open the Add General Rule form.

- Select any combination of parameters for the rule:

NOTE: If you select two parameters, then both must be met for a proposal to follow the rule; if you select three, then all three must be met for a proposal to follow the rule.

Department: Any proposal created for this department will go through the approval process. These come from CRM > Departments.

Amount: Any proposal created that is more than this amount will go through the approval process.

Proposal Type: Any proposal with this type will go through the approval process. (Proposal types are defined on the Proposal Types page (Setup > Proposals > Proposal Types), and the proposal type is selected on the proposal.)

- When finished, click **Save**.

User Rules

- To add a user rule, browse to the Approval Rules page. (Setup > Proposals > Approval Rules)
- Click the User Rules tab.

3. Click the **Add User Rule** button to open the Add User Rule form.

4. Select any combination of parameters for the rule:

NOTE: If you select two parameters, then both must be met for a proposal to follow the rule; if you select three, then all three must be met for a proposal to follow the rule.

User: Any proposal created for this user will go through the approval process; these are uses with the salesperson role.

Amount: Any proposal created that is more than this amount will go through the approval process.

Proposal Type: Any proposal with this type will go through the approval process. (Proposal types are defined on the Proposal Types page (Setup > Proposals > Proposal Types), and the proposal type is selected on the proposal.)

5. When finished, click **Save**.

Approval Rule Maintenance

In the grid for general rules and user rules, there is an Edit button and Delete button. Use these to maintain approval rules.

51406 Submit Proposal for Approval

Users can submit proposals for approval when the proposals follow approval rules. This is the general proposal approval process:

Setup

- Turn on proposal approval: System Defaults > **Require Proposal Approval** = YES (Do not set this to NO if any proposals are pending approval; the edit button on the proposals will be disabled, and no one will be able to edit the proposal.)
- Set up departments: CRM > Departments (Departments must have one or more approvers for a proposal to go through approval process. Only administrators can set up departments.)
- Add proposal rules: Setup > Proposal > Approval Rules (Only administrators can set up approval rules.)

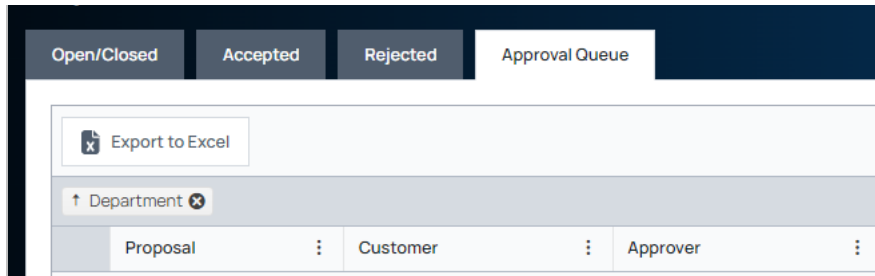

Proposal Creation and Approval

- A user creates a proposal that matches the condition(s) in an approval rule (proposal type/department/amount) and saves proposal.
- The proposal creator clicks the **Submit for Approval** button. There is a prompt: Are you sure you want to submit this proposal? You will no longer be able to edit this proposal until it is either approved or declined. Click **Yes**.
- The Proposal status is restricted while pending approval; the proposal creator cannot change the status to sold or closed.
 - The first approver gets an email about proposal approval.
 - The first approver logs into Managely.
 - The first approver can see proposals pending approval in the CRM > Proposals > Approval Queue tab (this tab shows only proposals that the first approver can approve. Admin users can see all proposals pending approval. Admin users can approve proposals on behalf of an approver.)
 - There are three ways for an approver to get to a proposal to review: link in the email; Approval Queue tab review button; open the proposal from the list.
 - On the Proposal page, the first approver sees these buttons: Accept or Decline.
 - If the first approver declines the proposal: (the second approver, if there is one, does not get an email about proposal approval)
 - The approver enters a reason for declining.
 - An email goes to the proposal creator about the declined proposal.
 - The proposal creator logs into Managely.

- On the Proposal page, the proposal creator sees the reason the proposal was declined (top left, proposal shows Needs Revision).
- The proposal creator edits the proposal and submits the proposal for approval again.
- The first approver gets an email about proposal approval.
- The approver logs into Managely.
- On the Proposal page, the approver sees these buttons: Accept or Decline.
 - If the first approver accepts proposal:
 - There is a message showing the proposal has been accepted and the proposal closes.
 - The second approver (if there is one) gets an email about proposal approval.
 - The second approver logs into Managely.
 - The second approver can see proposals pending approval in the CRM > Proposals > Approval Queue tab (this tab shows only proposals that the second approver can approve.)
 - On the Proposal page, the second approver sees these buttons: Accept or Decline.
 - If the second approver accepts the proposal, the proposal creator gets an email stating proposal has been approved. (The proposal shows Finalize and Complete Proposal button.)
- The proposal creator goes to the proposal detail screen and can click **Finalize and Complete Proposal** button or edit the proposal and send it through the approval process again.

51407 New Approval Queue Tab on Proposals Page

When using the proposal approval process, admin users and users who are selected as proposal approvers (in approval rules) will see the Approval Queue tab:

Proposal approvers will see the proposals they are able to review and approve. Admin users will see all proposals that have been submitted for review.

49076 & 50435 Lead Management

We added lead management functionality. This includes the ability to create and edit leads that have basic contact information (such as name, address, phone number(s), etc.); the overall disposition of the lead; stage of the sales opportunity associated with the lead; source of the lead; notes; documents; contacts; and a follow-up date for tracking the next action item. To find the Leads page, navigate to CRM > Leads.

1 - 21 of 21 items [Refresh](#)

To create a new lead, click the **New Lead** button. To open an existing lead, click the hyperlink in the Lead column in the grid. Creating a lead saves the lead as a prospect, which is visible on the Customers page (CRM > Customers). Prospective customers show the label Prospect in the top left corner. When a prospect accepts a proposal by signing and accepting an eForm or when a user changes the proposal to sold, Managely changes the prospect status to Normal Customer.

If a prospect rejects a proposal, Managely changes the prospect status to terminated. This is also shown in the top left corner. (Users can see terminated customers on the Customers page by clicking the Terminated Customers switch to YES.) If a proposal status is changed to rejected, the prospective customer status is also set to terminated.

New Lead Page

The screenshot shows the 'New Lead' form interface. On the left, the 'Choose Master Customer' section has a 'Select Existing Customer' dropdown and fields for 'Full Name' (First Name, Last Name), 'Business Name', 'Email', 'Phone', 'Cell Phone', and 'Address'. On the right, the 'Pipeline & Assignments' section includes 'Heat' (Cold, Warm, Hot), 'Stage', 'Primary Source', 'Secondary Source', 'Follow Up Date', 'Tags', 'Department', 'Primary Salesperson', 'Secondary Salesperson', and 'Comments'. A 'Save' button and a 'Cancel' button are in the top right corner.

When entering a new lead, enter or choose this information:

Choose an existing master customer or an existing customer. If the lead is not for an existing customer, type these details: First name and Last name or Business name (or both); Email address or Phone number (or both).

Address: If you choose an existing customer, the address fills in automatically from the customer record.

Heat: Choose the interest the lead has in purchasing your company's service or product.

***Stage:** Choose a stage for the lead. These come from Setup > Lead Setup > Lead Stages.

***Primary Source:** This is the origin of the lead. These come from Setup > Proposals > Marketing Sources > Primary Marketing Sources tab.

Secondary Source: These come from Setup > Proposals > Marketing Sources > Secondary Marketing Sources tab.

Follow Up Date: Select a date to follow up on the lead.

Tags: Choose an existing tag for the lead (these come from Setup > Operations > Tags) or click the plus beside the field to add a tag.

***Department:** This shows all active departments. These come from CRM > Departments.

***Primary Salesperson:** These come from the salespeople on the selected Department.

Secondary Salesperson: These are salespeople who are marked as a salesperson in the Employees list (Setup > Company > Employees).

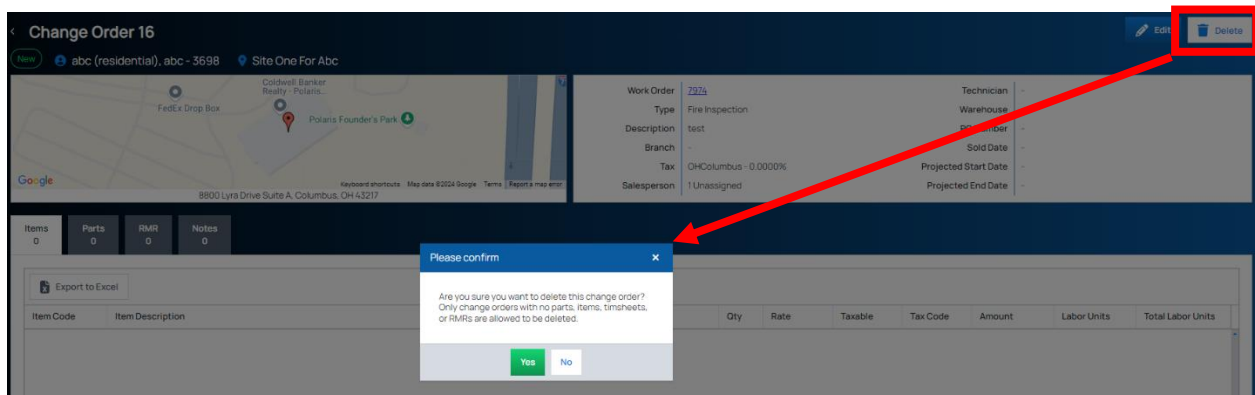

Comments: This is a free field for comments and notes.

48080 Add Part Long Description to Part Uploader [106570]

On the Parts Uploader, we added a column for the Long Description. To see this, navigate to Setup > Uploaders > Parts Uploader. Click Download Template. This is an Excel spreadsheet.

49795 Ability to Delete “Open” Change Orders

On the Change Order details page, we added a **Delete** button, so users can delete certain change orders. Users can delete change orders that have no items, parts, timesheets, or RMR, and if they have a work order status of open. If addition, any change order commissions on it must have total amount = 0; these will also be deleted with the change order.

51647 Ad-hoc Cost Edit on Proposal Item [116802]

For proposals, we made a change to allow editing the item cost. Also, we added the zone and location fields in work order items and proposal items.

The screenshot shows a dialog box titled "Edit Proposal Item - Install Labor-Taxable". The fields and their values are as follows:

Field	Value
Item Description	Installation Labor
System	
Zone	
Location	
Sales Tax Code	MI
Taxable?	YES
Quantity	1
Rate	\$0.00
Amount	\$0.00
Item Cost	\$0.00
Total Cost	\$0.00
Labor Units	0
Total Labor	0

51723 Purchase Order Status Changes on Delivery [116908]

The status of purchase orders did not change even after it was submitted. We updated the purchase order page to check for a submitted date, and if the purchase order has not been resolved, the status displays as submitted. This is visible on the purchase order detail page (Accounts Payable > Purchase Orders > PO# hyperlink).

51847 Customer Manager “Add” Permission Supports Edits to Customer Portal Users [118552]

We modified the role for Customer Manager Add, so that users with this role can also reset the passwords for customer users. This is the permission:

This is on the Add/Edit User form (Setup > Company > User Manager).

49807 Added Branch Selection to Standard Reports for Accounts Receivable and Accounts Payable

We added Branch as an option to the Order By field to all the reports listed below. This allows users to order reports by branch. Each report also shows the branch name in a column.

Accounts Receivable

- AR Aging Report
- Credit Reasons Report
- Detailed Deposits
- Funded Transactions
- Invoice/Credit Register

Accounts Payable

- AP Aging Report

51563 Added Branch Selection to Standard Accounting Reports

We changed these reports:

- Added a Branch selector for the Comparison Balance Sheet, GL Posting, and Comparison Profit & Loss Report
- Added a Branch selector and included the branch name in the GL Posting Report
- Added an Order by and a Branch selector and included the branch name and customer name in the Work Order Revenue Report

51805 Added Branch as a Column to the GL Register Grid [118305]

We added the Branch column to the grid on the General Journal Entry page (GL > GL Register > click Add General Journal Entry button > General Journal Entry page) and to the grid on the GL Account page (GL > Chart of Accounts > Account Number hyperlink > GL Account page).

51732 Added History for All Payment Types on Customer History [117776]

We added a button for history tracking to the Customer Payments grid:

A Business Company
Customer #3501 (Active, Normal) Residential-Owner • Since 6/13/21

Total Balance Due: \$1,353.11 | Total RMR: \$32.16

Customer Aging: [Bar chart showing aging distribution]

Address: 123 Main St, Columbus, OH 43204
Phone: (888) 555-1234
Cell: (619) 921-3939
Email: jeffrey.freet@boldgroup.com
Branch: Michigan
Auto Pay: Credit Card (1111)

Salesperson: Thomas Utley
PO Number: -
Last Statement: July 1, 2024
Default Term: Due Now
Delivery Method: Print
Delivery RMR Inv:

Comments: test comment

Navigation: Invoices (32), Credits (0), Sites/Systems (1/2), RMR (3), Work Orders (10), Bill To Information (1), Proposals (2), **Payments (14)**, CC/eCheck (15), Notes (1), Contacts (6), Documents (0)

Payment #	Payment	Deposit	Check Num	Payment M	Amount	Unapplied	Settled	Receipt	History
2248	Feb 17, 2023	3246		Credit Card	\$3215	\$0.00	<input type="radio"/>	Receipt	History
1169	May 19, 2022	2189		Cash	\$6.23	\$0.00	<input type="radio"/>	Receipt	History
1170	May 19, 2022	2189		Cash	\$200.00	\$0.00	<input type="radio"/>	Receipt	History

Clicking this button opens a window showing the payment history:

The screenshot shows a window titled "Payment Tracking" with a table containing three rows of payment history. The table has columns for Action, Message, User, and Date. The first row shows an "Update" action with the message "Payment was Updated" by "Ackerman, Kathy" on "2/20/2024 5:01:28 PM". The second row shows another "Update" action with the message "Payment was Updated" by "Ackerman, Kathy" on "2/20/2024 4:47:40 PM". The third row shows an "Add" action with the message "Payment was Added" by "Ackerman, Kathy" on "2/20/2024 4:47:17 PM". The table is displayed on a page with a footer showing "1 - 3 of 3 items" and a "Refresh" button.

	Action	Message	User	Date
+	Update	Payment was Updated	Ackerman, Kathy	2/20/2024 5:01:28 PM
+	Update	Payment was Updated	Ackerman, Kathy	2/20/2024 4:47:40 PM
+	Add	Payment was Added	Ackerman, Kathy	2/20/2024 4:47:17 PM

51744 Enhanced Clarity and Business Rules on Existing Invoice Item

For users managing invoice items, we added better descriptions and improved the user interface to enforce the options for invoice items making sure they are created properly for deferred and non-deferred revenue.

We made these changes for adding and editing items (Setup > Items & Parts > Items):

- Renamed “Is Commissionable?” to “Commissionable?”
- Renamed “Taxable” to “Taxable?”
- Renamed “Recurring Item” to “Recurring?” If this is set to NO, then Deferred? is also set to NO. If this is set to YES, then Deferred? is also set to YES.
- Renamed “Non-Deferred” to “Deferred?” The default is YES, and if the Deferred Income account is empty, it defaults to the account from the Company > Preferences > GL Account tab > Deferred RMR Income field.

We removed the restriction that prevented users from adding items to RMR invoices that were not marked as Recurring? = YES.

Finally, all active items are now available in the Item dropdown list in the RMR form accessed from these places:

- CRM > Customers > Customer Details > RMR tab > New RMR
- CRM > Customers > Add Customer > last step of wizard under RMR
- Accounts Receivable > RMR > RMR Details > Edit

52006 Ability to Flag Parts Coming from Stock Versus Direct Expense [00118830]

Note: For existing work order parts, this new functionality will not change parts to be Stock or non-Stock. Users will be able to issue or order the parts. Users can edit parts on the work order and set the Stock switch to YES or NO. Doing that will enable functionality specific for stocked or non-stock parts added by this feature.

For work orders, when users add work order parts, the part picker now shows a **Stock?** switch. User can set this to YES or NO:

Add Parts			
Search Parts <input type="text"/>			
Drag a column header and drop it here to group by that column			
	Stock? :	Image	Part Code :
<input checked="" type="checkbox"/>	<input type="checkbox"/> NO		Camera part
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> YES		Fire Alarm Part
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> YES		TestPart1
<input type="checkbox"/>	<input type="checkbox"/> NO		Vista 100

This switch indicates if a part is stocked in a warehouse or not. By default, the switch is YES, which means it is a stocked part. Stocked parts have a warehouse and are issued from that warehouse's available stock.

If the switch is set to NO, it is a non-stocked part and does not have a warehouse. Non-stocked parts are ordered from a direct expense purchase order. These are received (receipt + part issue) into a work order.

When picked parts are added to a work order, the stocked parts show their warehouse, non-stocked parts do not show a warehouse. This is shown on the Parts tab:

Appointments	Items	Parts	Part Kits	RMR	Billing
	0	3	0	0	

+ Add Parts				
	Part Code	Part Description	Stock?	Warehouse
=	Fire Alarm Part	test fire alarm part	<input checked="" type="checkbox"/> YES	DEFAULT
=	TestPart1	test part 1	<input checked="" type="checkbox"/> YES	DEFAULT
=	Camera part	test camera part	<input type="checkbox"/> NO	

The parts ledger creates records for only stocked parts (non-stocked parts are excluded):

Entry	Record Type	Origin	Entry Date	Total Amount	Status
55	Work Order	# 30 Type: Service Call I Doe, Jane - 1002	Aug 30, 2024	(\$26.50)	In Transit
Record Type	Record	Part	Quantity	Cost	Amount
Warehouse	#DEFAULT	Fire Alarm Part - test fire alarm p...	-1	\$15.00	(\$15.00)
Warehouse	#DEFAULT	TestPart1 - test part 1	-1	\$11.50	(\$11.50)

When users create a purchase order for the work order, only non-stocked parts are shown:

Order Parts					
Order Parts by Phases		<input type="radio"/> NO	Vendor Search: name - vendor #		Self
<input type="checkbox"/>	Part Code	Part Description	WO Quantity	Added To POs	
<input type="checkbox"/>	Camera part	test camera part	1	0	

◀ 1 ▶

+ Create Purchase Order
✕ Cancel

After creating a direct expense purchase order for the non-stocked parts and receiving them, Managely creates a part issue that updates the existing work order parts.

Here is an example:

A work order needs 5 cameras and 2 panels. The cameras are stocked in a warehouse and there are enough for the work order. The panels are not stocked. A user adds the cameras to the work order and sets the Stocked switch to YES. The user adds the panels to the work order and sets the Stocked switch to NO. Then the user creates a direct expense purchase order from the work order that includes the 2 panels. When the purchase order is received (the receipt created and the purchase order resolved), the 2 panels are automatically issued to the work order.

Here is another example with a stocked part that does not have enough in the warehouse for the work order:

A work order needs 8 cameras. The cameras are stocked in a warehouse, but there are only 5 in the warehouse. A user adds the cameras to the work order and sets the Stocked switch to YES. Then the user adds the cameras to the work order again for the 3 needed, but sets the Stocked switch to NO. The user creates a direct expense purchase order from the work order that includes the 3 cameras needed. When the purchase order is received (the receipt created and the purchase order resolved), the 3 cameras are automatically issued to the work order. If the cameras should be stocked in the warehouse, a user can create a purchase order from the warehouse for the quantity that should normally be stocked.

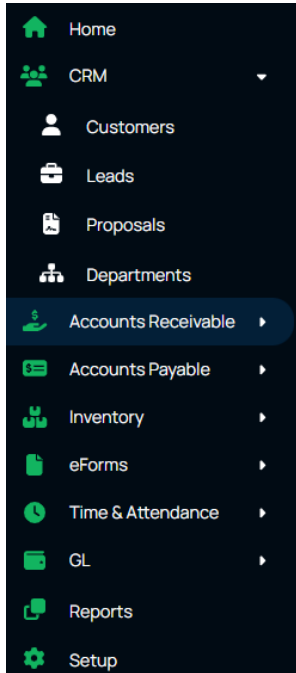

52452 Added Tracking History for Credit Card and eCheck Transactions [120171]

We added a **History** button to the CC/eCheck Transactions page:

52654 CRM Menu Moved to the Top of the Main Menu [120489]

We moved the CRM menu to the top of the main menu, so it is directly under Home:

51353 Removed Enterprise Licensing Option

We have simplified our licensing levels so that now there are two: Essentials and Pro. Dealers who were on the Enterprise licensing level will see no change in features. However, their licensing option will now show Pro instead of Enterprise. Dealers who are currently on the Pro licensing level will see some additional features.

53162 Changes for Items for New Stock Capability

When editing work order parts, users can now edit the **Is Stock?** and **Warehouse** fields on work order parts even if the work order is locked (such as when using progress invoicing). (All other fields are still disabled and cannot be changed.)

Part Description	test fire alarm part
Zone	
Location	
Is Stock?	YES
Warehouse	TestWarehouse
Sales Tax Code	None
Taxable?	NO
Quantity	1
Is Commissionable?	NO
Rate	\$85.00
Labor Units	0
Commission Amount	\$0.00
Amount	\$85.00
Total Labor	0
Part Cost	\$15.00
Total Cost	\$15.00

All work order parts coming from a completed proposal will default to Stock? = YES and use the default warehouse set on the Preferences page (Setup > Company > Preferences > Inventory tab > Main Warehouse field).

The Parts Issue screen (from work order parts issue) will only display stocked parts; non-stocked parts are filtered out automatically.

Application Corrections

51021 GL, Part Ledger, & Inventory not updating on a no cost work order [112717]

When closing work orders flagged as “do not invoice”, Managely was not issuing any remaining unissued parts on the work order. We fixed this to issue remaining parts on completed “do not invoice” work orders.

51757 All selected columns on a grid should include data on export [118075]

Users reported that information in custom fields were not being exported Excel. We resolved this so the Open work orders, Proposals, Sites, and Systems grids that have custom fields displayed will also properly export their values to the Excel spreadsheet.

52000 Error message appears when applying cash to a deposit- however, the cash DOES apply [118832]

We made a change to handle Avalara invoices if the Invoice Total Amount has not been changed.

52047 No option to filter “Prospect customers” in the customer listing

On the customer page (CRM > Customers), users were unable to filter the page by prospect. We added a switch at the top of the grid called **Prospects**. Switch this to YES to see a list of prospects.

52058 Closed receipts are not visible on PO

On the Purchase Order details page on the Receipts grid, we improved the functionality of the Show All Receipts switch. Setting this switch to YES shows all open receipts; receipts that have been closed or converted to a bill; and deleted receipts. This also shows two additional columns in the grid: Is Converted to Bill and Deleted. Setting this switch to NO shows only open receipts that have a total amount over \$0 and hides the Is Converted to Bill and Deleted columns.

We changed the Show All Receipts switch to function the same way on the Vendor details page Receipts tab and on the Bills page Receipts tab.

Finally on the grid on the Receipts tab, we added the Last Modified column.

52092 Overview RMR in proposals is not calculating [119198]

When resolving this, we made these changes: added Monitoring Fees to the proposal and fixed the page so that the Net Monthly Total on the proposal overview RMR section is calculated as expected.

52148 “Late Fee Item Code Not Set...” error when generating statement with late fee disabled in settings [119408]

We corrected this so when the **Charge Late Fee?** switch under Setup > Accounting > Statement Rules is set to NO, the error is not generated, even when the **Late Fee Item** is not set in Setup > Company > Preferences > Late Fee tab.

52252 Bill Date Entered Does Not Match Display [119791]

There were some instances of incorrect date/time stamp on bills. We made a change to convert the entry date and bill date to UTC so that it is the same across different time zones.

52506 Error (No Response) when attempting to view linked customer accounts [120188]

When viewing the Accounts tab, the grid would take a long time to load due. This issue was fixed and loading the accounts is quicker.

52924 Error on progress invoicing [121337]

We fixed these issues around Progress Invoicing:

- Deleting a progress invoice no longer gives an error.
- A backend calculation was doubling amounts for multiple items that had the same ID and multiple parts that had the same ID so the calculated total amount for all progress invoices was a higher amount than the work order total amount, which would cause an error.
- Making a change on a work order total amount will recalculate the percentage for all existing progress invoices to verify that the “Invoice Total Amount/Work Order Total Amount” ratio is still valid.

53018 Populate WO#'s on all bill GL entries [121401]

We added Work Order Numbers to Bill GL entries.

Internal Changes (not on customer release notes)

48497 Upgrade Managely to .NET 8

No doc. See work item for details.

Application Corrections

51501 Accounting reports issues

We fixed an issue with two accounting reports:

1. Reports > Accounting > Profit & Loss
2. GL > GL register

The balances of GL accounts where IsCreditAccount = true are calculated as credits minus debits, while the balances of GL accounts where IsCreditAccount = false are calculated as debits minus credits.

52084 Purchase order screen takes time to load the correct data

We fixed an issue found when opening two purchase order pages, the second opened page would briefly display the data from the first purchase order before displaying the correct data.

52098 Vendor issues

Fixed these issues related to vendors:

- Made the **Default Payment** dropdown required on the UI to avoid user confusion while adding new vendor.
- Fixed a branch error shown when copying a receipt (or a bill) for a vendor.
- Fixed the Payee name appearing as blank on bill payment detail page.
- Fixed an error shown while trying to open the voided payment detail page, and all details appeared as blank for payment detail.
- For credits, made the vendor name a hyperlink the same as it is for bills and receipts.

52317 Proposal: Discount and Deposit fields disabled after saving

When editing a proposal, the discount and deposit fields have been enabled when their values are greater than 0.

52364 Able to edit proposals with pending approval status from the proposal listing

Changes in the frontend and backend to disable the edit button from proposal listing page if proposal has any of these status Sold, Revised, Pending Approval.

52370 Restrict the system from changing the proposal status to Review when copying a proposal that is going through the approval process

We made changes in the backend to not set the revised status of original proposal if the proposal status is Sold, Pending Approval, Needs Revision, or Ready for Submission.

52372 Proposal approval issues

Changes in the frontend/backend to fix white space issue of the declined proposal modal, and after declined the proposal Submit for Approval button will be displayed if user made any change in that proposal.

52376 Hide some proposal statuses when proposal falls under any of the approval rules

We should hide some of the proposal statuses when any proposal falls under approval rules and is not submitted for approval yet to restrict the user from bypassing the rules. New API in the backend and made subsequent changes in the frontend to get filtered proposal statuses on request.

52379 Note field is accepting white space in Add/Edit

Resolved the white space issue in the Note Field on the Add/Edit Customer Notes and Create Physical Inventory pages.

52735 Customer selected count not getting updated correctly after unselect customer

We fixed this to update the count of selected customers when a customer is unselected.

52820 Part kit sales tax issue

Correct sales tax was not shown when part kits were added on the add proposal page. Fixed so that the correct sales tax is shown when a part kit is added on the proposal page.

52857 Proposal print/deliver button issue

The Print/deliver button was displayed on the edit proposal page. Made changes in the front end to hide the print deliver button on the proposal edit screen.

52945 Update email status job header missing dealerID

Fixed so the dealer ID is shown as expected.

53023 Branch not set on recurring invoices

Enhanced the RmrFactoryService to ensure correct branch information assignment during invoice processing.

53030 Host report page issues

Fixed three UI issues in the Host:

- Reports > Dealers > Monthly Summary: the Run Date was not aligned with the field.
- Reports > Dealers > Monthly Summary: the dealer list was not scrollable.
- Host setup > Service Types > New service type: The label Service Description overlapped the field.

53098 Sales tax data not coming for items, parts, & part kit under proposal charges

Sales tax data did not appear under proposal charges for items, parts, or part kits. We changed the frontend to display the sales tax code in the charges grid under proposals and updated the backend to include both the sales tax code and the sales tax name in the charges grid of the proposal template for the Print/Email proposal functionality.

53122 No Branch on Credit UI

Branch name now shows up in Credit Details.

53132 Add zip code limit

There was no limit for Zip Code while adding or editing Resellers. Set minimum and maximum length limits on the 'ZIP Code' field for add/edit Dealer Information, New Customer Registration, and Resellers.

53159 Redirection issue for resellers (host portal)

When a user clicked the cancel button (on add reseller page), the user was directed to the Monthly summary report. We fixed this to redirect users to the correct page.

53160 Missing Functionality: Reactivate inactive bill-to-address records

There was no way to reactivate inactive Bill-to-address records. Made changes to both the front end and back end for the reactivation functionality on the Customer Bill To tab.

53184 Tasks: no scroll bar for large notes & documents list

Changes done in the SCSS file for notes and document file to display the scrollbar when the grid list gets exceeded.

53187 Comparison Profit & Loss report not working

Made changes to the backend for the Comparison Profit and Loss report.

53276 Handle default template on work orders

If a user did not have a template selected for their Work Order, then attempting to deliver that work order to the customer caused an error. We added a new method to the template service to get the template or default.

53303 Issue in notes and documents grid

These grids were not using all available space on the screen. We fixed the height for the notes and documents grid.

53309 Branch data not auto- populating from vendor branch while creating credits

We fixed these issues with branch data:

Issue1: When adding vendor credits, the branch data was not auto populating from the vendor's branch.

Issue2: When adding branch data and saving credits, the branch data became blank.

53333 Unable to navigate from Department Details screen to other menu items with a single click

Fixed the routing issue at the Department page in the front-end code.

53352 Item Default: Items search issue

Resolved the dropdown issue by preventing the original array from being mutated during filtering. Introduced a second array, itemsSource, and applied filters only to this array. This keeps the data intact and prevents any overwriting.

53539 New Bill from Purchase order cannot be saved

When creating a new Bill from a purchase order, the Purchase Order drop-down did not contain a PO, which kept the save button from being active. We fixed this so the system will load the purchase order details and then populate the fields on the Bill form.

53540 Save Button not active on Add Invoice Item

The issue was disabling the button according to logic which is only applicable to Pro tier. Now fixed.

53548 Vendor Receipt allocation filtering

When creating a new receipt from a purchase order, Managely did not filter out deleted bills when calculating the allocated amount on parts and items. Therefore, the items and parts were not being added to the new receipt. The issue was caused by the system not filtering out deleted bills/receipts. Parts/items on deleted receipts will no longer be counted towards the "allocated" quantity (reduces remaining qty on receipt). Also, the PO bills/receipts grid will no longer "Show All" toggled on by default. Deleted items/parts will be hidden by default.

53596 Branch Column showing on Essentials

Added Restrictions for license Level so branch column does not show for Essentials license.
