

Setting Up Sedona-X Mobile Role Group Permissions

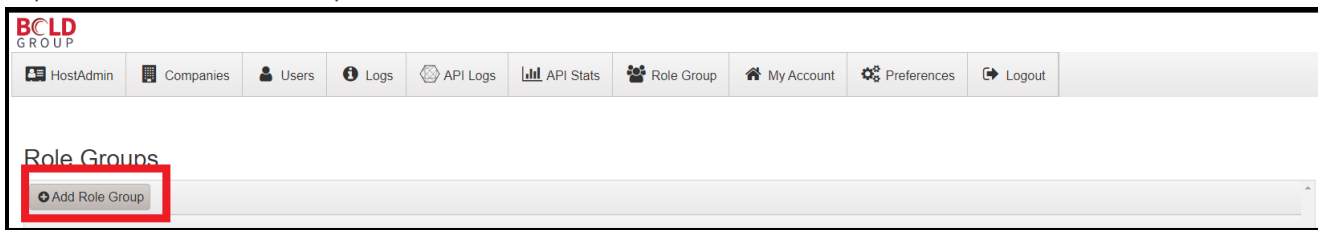

12/28/2023 3:50 pm EST

Creating a Custom Role Group in Sedona Cloud API is a straightforward process.

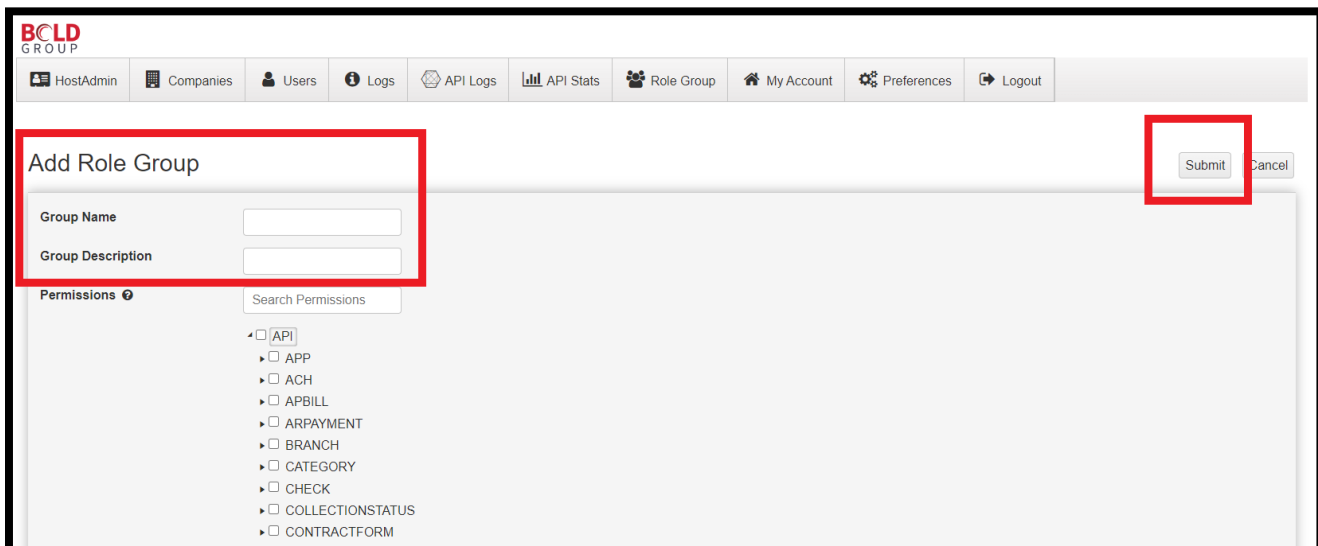

Step 1: Go to the Role Groups header.

Step 2: Click on Add Role Group

Step 3: Enter the Group Name and Group Description. You will need to configure the permissions by selecting the boxes. You can use existing role groups as a guide to which permissions need to be filled in, or look at the map of API Roles to determine what you would like the permissions of the role group to enable.

Step 4: Go back to the Role Groups menu and verify that the role group you just created is available.
