

SedonaOffice Cleanup of Bad Data in Parts

12/29/2023 12:54 pm EST

This [file](#) can be run to clear special characters, padded spaces, etc. from part records, as well as PO, receipt, and job records.

It also corrects duplicate part codes.

The final script at the end allows you to pull a list of all duplicate parts that were corrected.

This list should be sent to the customer so that they can correct those parts as needed (they may need to transfer their quantities and inactivate them for example).
