

Development - Accounting PR validation Environment

12/29/2023 4:15 pm EST

Overview

We have setup an Azure VM to be the Pull Request validation test server for Accounting products. It is called SedonaCloudPRCI and is set up under Toby Prescott Azure credits.

The current public IP is [104.208.39.79](#)

We are deploying to this machine as the result of two pipelines that trigger from a Pull Request (creation or update) [PRCI \(build pipeline\)](#) + [PRCD \(release pipeline\)](#)

Right now this is set up for:

- Sedona Cloud
- AlarmBiller (SedonaOne)

We also have an instance of Sedona Office installed there as well.

SedonaOffice will have to be manually updated for now.

Host entries Needed

We are using the *.Boldgroup.solutions wildcard certificate for now because we already purchase this for many other servers. To make this work we must add host entry files on any machines trying to access these products.

Add the following to your file [c:\Windows\System32\drivers\etc\hosts](#)

```
104.208.39.79 sedonacloudprci.boldgroup.solutions
```

```
104.208.39.79 boldgroup.solutions
104.208.39.79 host.boldgroup.solutions
104.208.39.79 abdealer.boldgroup.solutions
104.208.39.79 qa.boldgroup.solutions
104.208.39.79 cloud.boldgroup.solutions
```
