

SedonaCloud Setup for Sedona-X Mobile

12/28/2023 3:57 pm EST

Deploy 1.25.1+ of SedonaCloud

We should have IT deploy version 1.25.1 or higher of SedonaCloud to either the customer's on-premise environment or cloud-hosted environment. You will also have to ensure that IT has set the AppPoolIdleTimeoutMinutes option to 0. The will ensure the customer does not have any speed/lag issues when connecting to SedonaCloud

Create a new SedonaCloud license with Sedona-X Mobile enabled

1. To create a new license, please go here
 - a.
2. Enter any unique value into the Signature input and click "Create" to generate a new Private and Public Key.
3. In a new Browser Tab, open the License Generator page found in the top.
4. Enter the same signature from the first page.
5. Enter the generated private key from the first page.
6. Set the license expiration date far in the future, i.e., 2050.
7. Enter Customer contact name in License to name.
8. Enter Customer email in License to email.
