

SedonaOffice - SQL Script - Customer_ID reveal for SedonaWeb Duplicate Accounts Error

01/02/2024 6:42 pm EST

```
select c.Customer_Number,c.Customer_Name,ws.* from WS_Account ws  
inner join AR_Customer c on c.Customer_Id =ws.Customer_Id  
where Account_Name ='the_email.com'
```

That's what identifies the Customer Number, got that one removed from the cancelled customer to the new customer, was able to register their account.
