

Manitou Core - SQL Query - Find Accounts where Programming doesn't match Signaling

01/02/2024 6:16 pm EST

This query helps find accounts where the signaling doesn't match the account programming. Specifically, where there is 4X2 programming on the account and the account is sending in Contact ID.

```
-- this query is used to find where the customer programming doesn't match the signaling.
use manitou

select
customer.contid 'Cust ID'
,contact.fullname 'Cust Name'
,clog201408.*

from customer
join contact on customer.serialno = contact.serialno and contact.conttype = 1
join CLOG201408 on customer.serialno = CLOG201408.serialno and CLOG201408.keyalm like '[e,r][0-9][0-9][0-9]'

where
customer.serialno in (select serialno from stxpgr where stxpgr.des = '*A')
```
