

# Server Health Watchdog Messages

01/10/2024 1:43 pm EST

## Description of Issue:

A Server Health Watchdog message is received and all configuration settings appear to be set correctly. Review how the Server Name is set up.

## Fixes:

Make sure that the Server Name is in all CAPS in the Manitou Config section.

The Server Name can be anything, but all lower case letters in the Server Name can cause this message.
