Dashboard Collector Setup Instructions

This article is to help with the installation of the Collector Server used with Manitou NEO's Dashboard.

The following is a list of prerequisites for installing the Collector for the Manitou Dashboard UL Compliance data.

Hardware

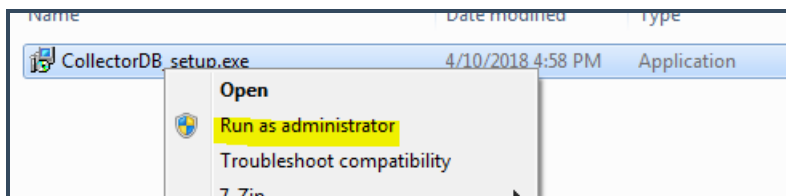

- Recommended to have a separate drive for the Collector database. This database produces a lot of data and can get very large quickly.

Installation

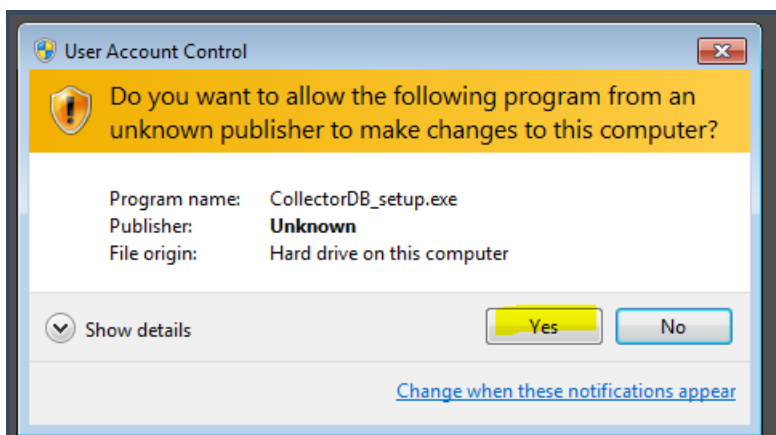

The steps below will go through the installation of the Collector Database and the Collector Service.

Collector Database Installation

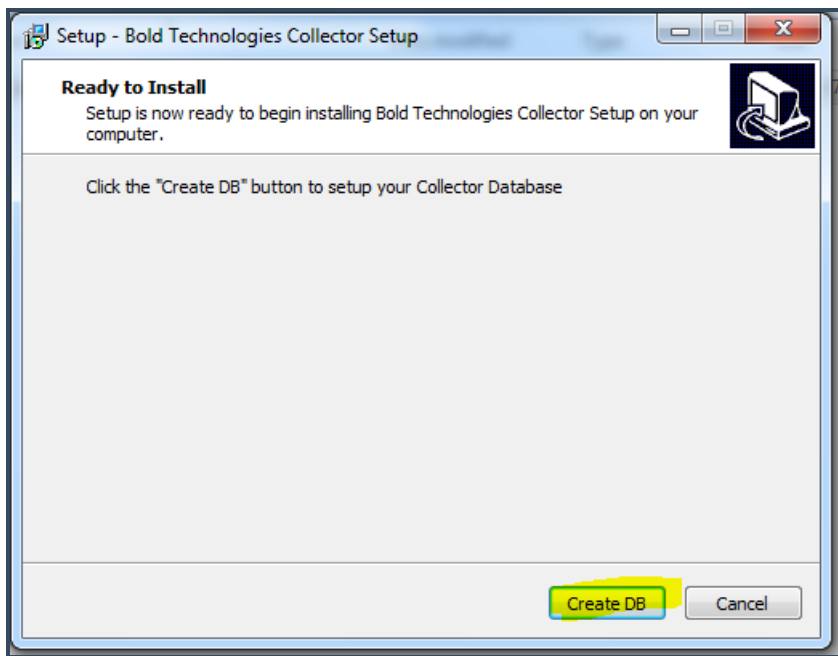

- Right click the CollectorDB_setup.exe and click Run as administrator

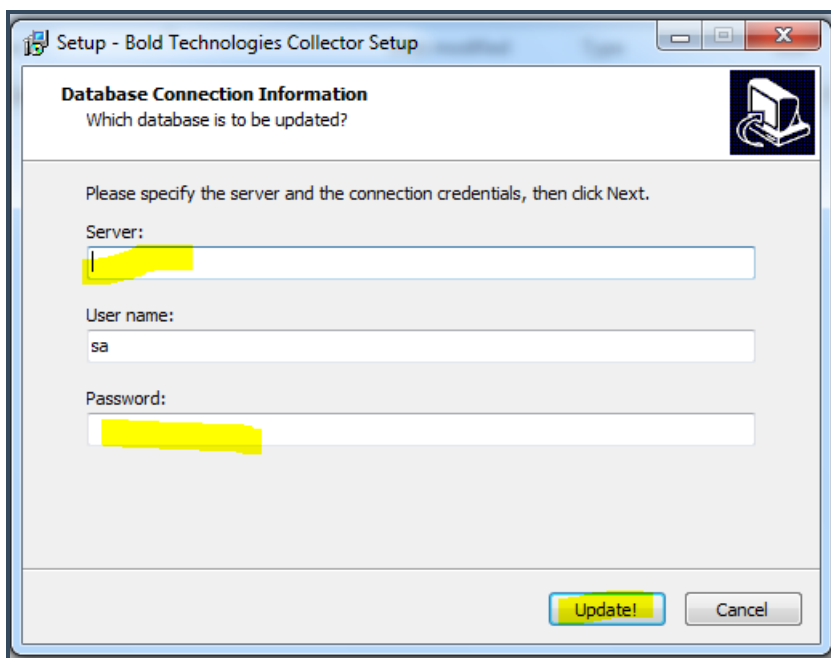

- Select yes on the UAC prompt

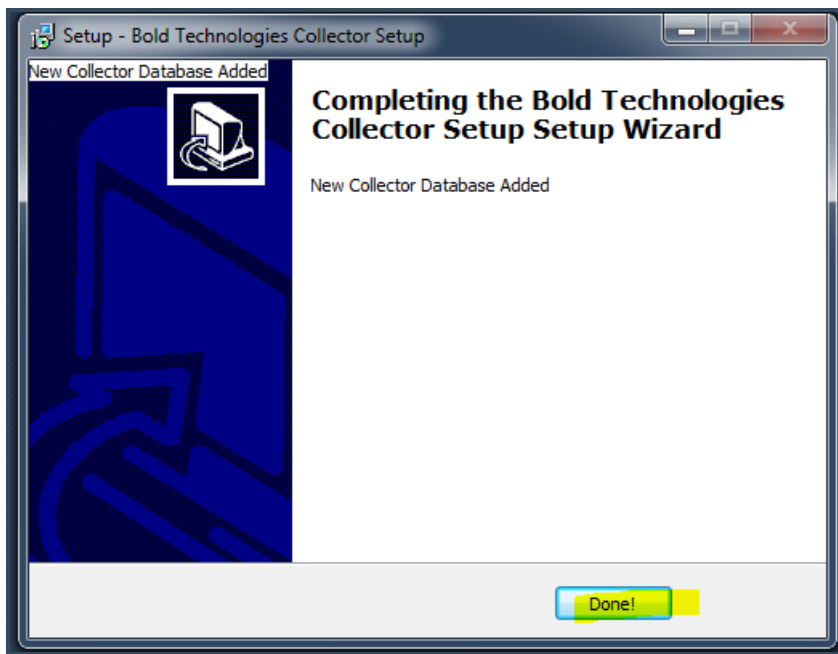

- Select Create DB

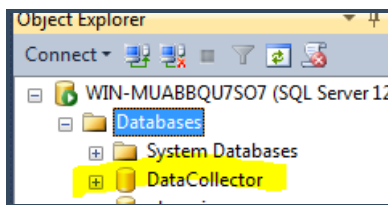

- Input the Database Server, SQL Username, and Password into the fields and select Update.

- Select Done

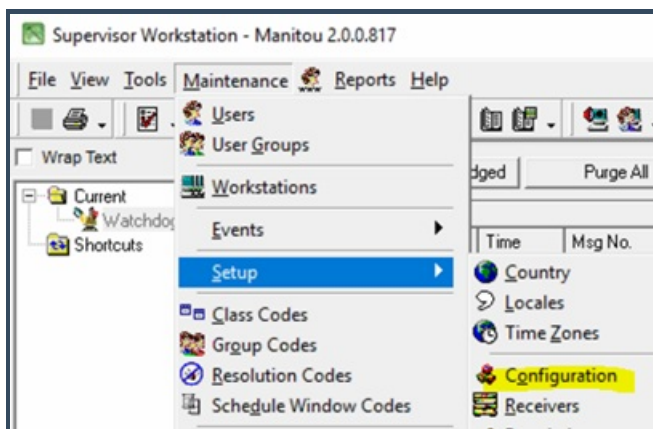

- Connect to the Database Server to verify the DataCollector Database was made.

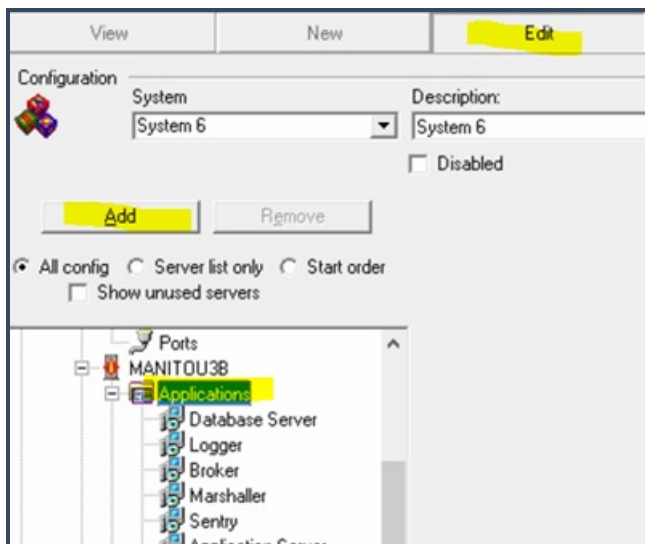

Supervisor Workstation Configuration

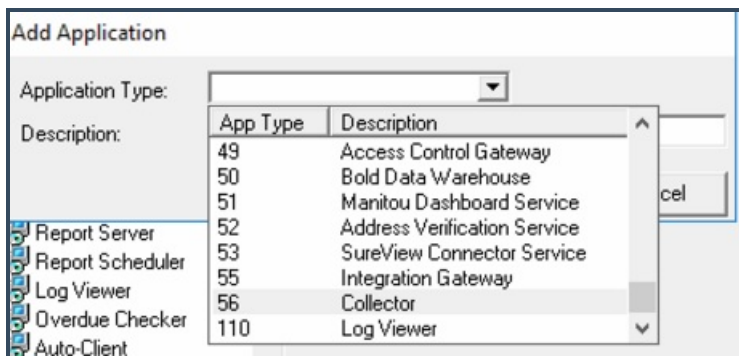

- Open Manitou Supervisor Workstation
- Click on Maintenance – Setup – Configuration

- Click on the System – Edit
- Click on Applications under the correct server – Click on Add

- Add the Collector – Select 56 Collector – Enter Description – Then click OK

The customer can now add the following Compliance options to their dashboard.
