

# Distributer Package Descriptions

01/10/2024 12:35 pm EST

The Packages Table below details what each function each Distributer package installs.

| Package Number | Package Feature             | Additional Notes                      |
|----------------|-----------------------------|---------------------------------------|
| 1              | Distributer                 | Required                              |
| 2              | Runtimes                    | Required                              |
| 3              | Upgrade Utilities           | 1.6.1 and previous                    |
| 4              | Rscoree.dll                 |                                       |
| 5              | Location Server             |                                       |
| 6              | Port Splitter               |                                       |
| 7              | Bold PBX TAPI (x32)         |                                       |
| 8              | Bold PBX TAPI (x64)         |                                       |
| 9              | Help Files                  |                                       |
| 11             | Sheridan Software           | Older Faxing System Files             |
| 12             | Media Gateway               |                                       |
| 14             | Browser Host                | Requires Manual copy for full package |
| 20             | Secure Voice                |                                       |
| 21             | Secure Voice                |                                       |
| 22             | Secure Voice                | (use these)                           |
| 30             | Card Access System Packages |                                       |
| 32             | PBX for Aeonix              | Versions 2.4 and 2.4                  |
| 33             | PBX for Aeonix              | Version 2.5.142                       |
| 34             | PBX for Aeonix              | Versions 1.5.142 and 3.0.664          |
| 35             | PBX for Aeonix              | Most Recent Update                    |

|    |                                   |                                                                                                                                                                                                                                                |
|----|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 36 | Relevant,<br>Undocumented         | Undocumented, Relevant                                                                                                                                                                                                                         |
| 37 | PBX Server                        | for 2.1 compatible with Aeonix 2.5.142 and UCx 02.08.08 or higher                                                                                                                                                                              |
| 38 | PBX Server                        | FIX TO TWO-WAY DISTRIBUTER COMPATIBILITY                                                                                                                                                                                                       |
| 39 | PBX Server                        | Aeonix 3.2.463 as long as you have the MC_g.jar patch from Tadiran                                                                                                                                                                             |
| 40 | BoldNet Mobile                    |                                                                                                                                                                                                                                                |
| 50 | Emailing<br>Dependencies          | 32-bit files                                                                                                                                                                                                                                   |
| 51 | Emailing<br>Dependencies          | 64-bit files                                                                                                                                                                                                                                   |
| 60 | C++<br>Redistributables           | Only for Aspose installations                                                                                                                                                                                                                  |
| 70 | AutoDispatch<br>Gateway           | This is the NEW AutoDispatch Gateway for the NEW ASAP-to-PSAP method AND the other dispatch integrations (ASINC, AMBV, AU FireBrigade, etc)                                                                                                    |
| 89 | Managely                          | <p>***** For Manitou 2.1 patch 37 and up only *****</p> <p>NOTE: This also includes the 64-bit base files for Router and Router Config. Do NOT push package 90 with this one.</p>                                                              |
| 90 | Router x32<br>Base Files          | These are the 32-bit Router and Router Config files to be used with older accounting integrations.                                                                                                                                             |
| 91 | SedonaCloud                       | <p>***** For Manitou 2.1 only *****</p> <p>This is the new API integration for SedonaCloud</p> <p>NOTE: This also includes the 64-bit base files for Router and Router Config. Do NOT push package 90 with this one.</p>                       |
| 92 | Sedona                            | Old x32 integration with direct database connection                                                                                                                                                                                            |
| 93 | Navision                          | x32 integration                                                                                                                                                                                                                                |
| 94 | QuickBooks                        | x32 integration                                                                                                                                                                                                                                |
| 95 | BoldNet<br>Silverlight<br>Hotfix  | Used for 2.0 compatibility                                                                                                                                                                                                                     |
| 96 | x32 DBManager<br>supporting files | <p>*****DBManager version 2.1*****</p> <p>These files go to the gDal directory is what enables us to read the geoshape files.</p> <p>These files go to the SqlServerTypes directory is what enables us to put those shapes in the database</p> |
