

# AutoDispatch 2 and Manitou Logger

01/10/2024 12:32 pm EST

## Introduction

The Manitou alarm provider driver is an integration between AutoDispatch 2 and the Manitou logger. In addition, this driver is a hard dependency for the AutoDispatch 2 and will be used (along with the console logger if running from the console) as the default logger while bootstrapping the system. Once the system is bootstrapped, the configured logger driver will be used.

## Driver File

The Manitou Logger driver file is `ManitouLoggerProvider.dll`

## Configuration

The Manitou Logger driver is configured in the startup parameters for AutoDispatch 2. This is done so as to be backward compatible with AutoDispatch 1.

## Startup Parameters

Parameter	Description	Default
(Second parameter without a hyphen prefix)	hostname/IP of Manitou logger machine	localhost
