

# How to Install an Event Pack in SedonaSync Version 10

02/12/2024 10:53 am EST

## Description of Issue:

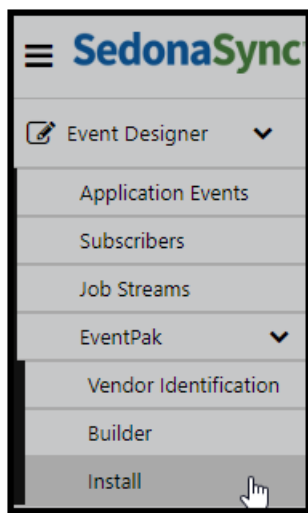

I have been asked to install an event pack for SedonaSync. How is this done?

## Resolution:

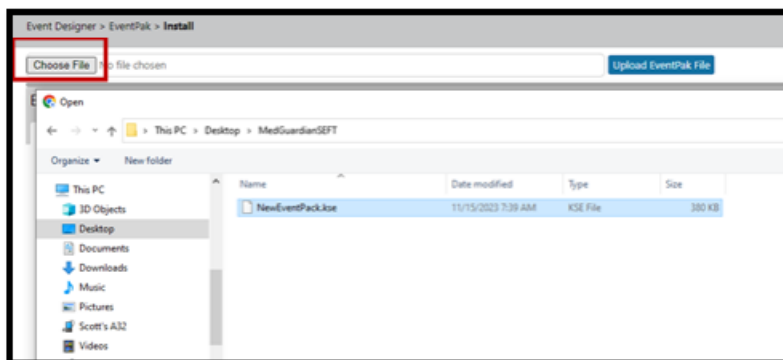

Log into Sedona Sync.

On the left go under Event Designer and select EventPak.

Click on Install.

When the screen opens click the choose file button to select the event pack to install.

After the file is selected click the Upload button.

Once the file is uploaded you will see the details of the event pack.

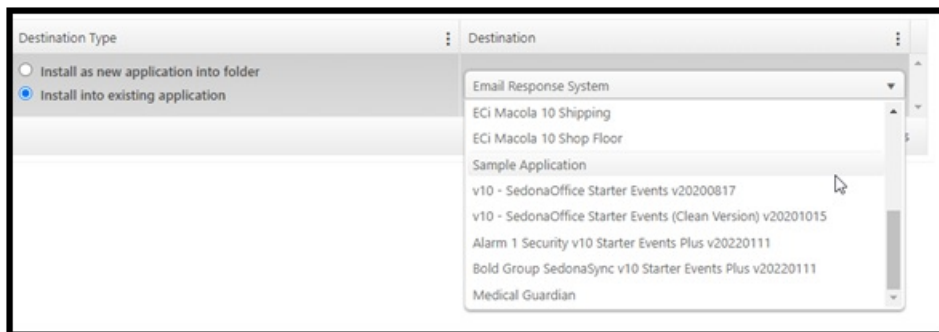

You can click Install and add the event pack or click the Applications tab for more options.

The events in the Application will show and you have the option to install them to a new Application folder or add them to an existing Application folder.

If you select to install an existing application, you need to select the folder to use.

Once you have made your changes click Install.
