

# What Permissions are needed to see QueryBuilders

02/08/2024 5:35 pm EST

SedonaOffice has a tool that enables SedonaOffice Users to create custom queries based on their company's data that is stored in the SedonaOffice database. QueryBuilders have permissions set to be able to access and use them.

## Overview

Below are the permissions needed for each QueryBuilder available in SedonaOffice – Query. The screenshot below indicates, if the permission is checked for that QueryBuilder, then it will show in the dropdown list as available to use for that user. The permissions are selected for that User Group and any user that is assigned that user group will have access to the QueryBuilder selected.

□

QueryBuilders only select data from the database. They are not able to update or delete data.
