

Eforms Template Different in Preview

04/29/2024 9:42 am EDT

When an Eforms template looks different in practice than in preview the first troubleshooting step should be to –

1. Identify the field that is pushing data out of alignment.
2. Edit the template, remove that field, and save.
3. Edit the template again, add the field back, and save.
4. Test to see if this has resolved the issue.
