Select the **Utilities -> License Manager** menu to display the License Manager window. This window is used to perform all licensing activities. The License Manager window is divided into 4 frames:

License Manager

License Manager

IMPORTANT: When first entering License Keys, enter the Serialized Update Key starting with the letter 'U' first, then enter the License Key that begins with C, J, or F.

Update Key

Format: U-123456-12345678-123456

U-151231-12345678-123456

[expires 12/31/2015]

Enter Update Key

Remove Update Key

NOTE: Entering the Update Key does not automatically update QuoteWerks.

Total: 5

Distribute Licenses

QuoteWerks allows you to create sub-licenses for all the remote site networks and remote user PCs in your enterprise.

Create New Remote Site License

Create New Remote PC License

Create Security.mdb for Remote PC or Site

Close

This table lists all the License Keys entered into this QuoteWerks installation. Multiple License Keys can be added to a QuoteWerks installation. Adding additional License Keys of the same type can increase the total number of users allowed to use QuoteWerks. Adding additional License Keys can also activate optional modules like the QuickBooks accounting software link.

When this installation generates Remote PC and Remote Site License Keys, they will also be listed in this table.

Update Key

Users are required to add their Update key in their License Manager. When installing updates, the installer will check for the key entered here. New users cannot add their QuoteWerks license keys until the update key has been added to the installation.

Note: Adding the update key does not automatically update QuoteWerks. You must download the latest update and run the installer to update QuoteWerks.
