

FSU Install

02/12/2024 8:45 am EST

Make sure FSU is enabled on the license.

Need to access documents server and SQL server.

Need open VPN to both, grab OpenVPN zip from area51 (contact Chris if not there), copy to their server, make sure no open VPN already installed, Uninstall old OpenVPN if needed and delete old OpenVPN folder, install OpenVPN from area51 folder, copy files other than installer to config folder.

Network connection, adapter settings, tap interface for open VPN, disable ipv6, ipv4 properties, static IP given in IP_Info.txt or similar from the above folder, class 3 subnet-

Services, start the OpenVPN service and change the startup type to automatic.

Connect to SQL server that hosts customer DB, run FSU scripts for data, connect to IP set up above, run FSU scripts for documents against documents database,

FSU management company login. Login as Master/\$edOna, click new, find the company in the drop-down menu, add, set up a password (CompanyYear) and OpenVPN IP address, update, find in the list, select, set the password again to ensure it's in, record company #/company name/password (CompanyYear) in notepad, set IP address to SQL server hosting their database. Check the activate checkbox.

Login through the user admin portal (*/*/Master/D***2**5), go to technicians (use their login), and run it. run technicians, select the database, add, add.

SCSQL - 10.42.42.36

SQLMain - 10.42.42.11

SCSQL2 - 10.242.242.32

AWS: Can add the named instance (E.g. SQLAWS1\ExampleSQL) for the documents and company database connections.

FSU installation must be through the same network.
