

# Sandbox Cleanup

02/12/2024 12:35 pm EST

## Sandbox Cleanup-

Access your SQL server and log into SQL Server Management Studio.

Expand **Databases**, locate the **SedonaMaster** database, and expand its tree. Expand **Tables**, and right-click on the **Company** table then choose 'Edit Top 200 Rows'.

This table is the company list that users get to select from when logging into SedonaOffice.

The CompanyName column is what the company is named in the list, but is not the actual database name.

View the DataSource column. These are the actual database names associated with the company. Make a quick list of the databases you no longer need from this table.

In this company table, select the rows for the sandboxes you no longer want, and press delete on the keyboard to erase them.

	Company_Id	CompanyName	Address	Phone1	Phone2	FederalId	Connection...	Computer...	DataSource
	6	Master Setup Standard	999 Maple St	9994441111			Provider=S...	MARKSLAP...	MasterSetupStanda...
▶	7	SedonaSecurity	999 Maple St	9994441111			Provider=S...	MARKSLAP...	SedonaSecurity
*	NULL	NULL	NULL	NULL	NULL	NULL	NULL	NULL	NULL

Once you have deleted the company row for the sandboxes you no longer want, look back under **Databases** in the left pane and just select and right-click and choose to delete the sandbox databases themselves. This removes the actual database.

That's it!

If you have any further questions or don't feel comfortable following this process, please let us know.
