Hey,

The RecordComms.dll file is in the attached zip.

I copy/pasted the relevent portions of the error emails, and highlighted the interesting bits. That second exception, TypeInitializationException, is almost always due to a missing/bad file.

Subject: RecordComms file

The attached is a zip file. Putting the file within (RecordComms.dll) in the SO install directory should fix the issue in the error message below.

(Whoever you have do this should look for an existing copy of this file. If one exists, they should change the extension to .bak (or whatever) before copying the new one.)

Note that it is possible that another DLL upon which "RecordComms" is dependent is missing. In that case, this solution will not work.
