

SedonaOffice Install (enterprise)

02/13/2024 11:44 am EST

I can get SedonaOffice installed for you on 1/15/2018. I will need to get a LiveAssist on your SQL server (or we can use another remote access method if preferred). Let me know what time works for you. I am available from 8:00am-5:00pm EST.

To ensure the install can be finished as planned, please review the system and SQL requirements (Named Pipes enabled, default instance of SQL, 2008 R2 or newer, standard or enterprise just not Express). System requirements are on our site, here: <https://sedonaoffice.perennialsoftware.com/resources/reference-documents/system-requirements/>.

Also note that clients will need to access the server over TCP/UDP ports 1443 and 4992. Once the server install is completed, we can walk through a client install which is a pretty straightforward process once you've seen it.
