

Installing and Error 3265 Item cannot be found in collection corresponding...

02/13/2024 2:33 pm EST

It looks like the error you're getting is because you're running the installer locally, so it's missing the server name in the registry.

HKEY_LOCAL_MACHINE\SOFTWARE\WOW6432Node\Sedona Development Company\Client

ServerName and the DataSource in the SedonaMaster key need the server name specified:

 SedonaMaster	REG_SZ	Provider=SQLOLEDB.1;Persist Security Info=False;Initial Catalog=SedonaMaster; Data Source=INHOUSESO;OLE DB Services = -2
 ServerName	REG_SZ	INHOUSESO

This is why we recommend to install clients from the [\\YourSedonaServer\SedonaOffice](#) Installation Files location, as a proper server install will create an .ini file at this location that will create the proper registry keys.

If you need more help with this let me know. We can set up a LiveAssist if necessary.
