

# List of SedonaOffice SQL Tables

07/02/2024 6:18 pm EDT

Working with SedonaOffice will require a Sedona Expert, on occasion to look for fields and data from one or several SedonaOffice SQL tables. Here is a script to pull all the tables from SedonaOffice and a sample copy of the results. You can then use a standard select statement to search for fields or data.

Example: Select \* from ar\_customer

```
SELECT *  
FROM INFORMATION_SCHEMA.TABLES  
order by table_name
```

Example data from this query can be found [here](#).
