

Querying in Microsoft SQL Server Management

07/02/2024 6:27 pm EDT

The following steps will get you started on processing simple customer queries in Microsoft SQL Server Management Studio.

1. Once logged into SSMS, rick click on the Database on the left side of the module

2. Click on New Query. Another module will open on right side of the module.

□

3. Create a query. Below is an example of a simple query on the customers table.

□
