

How to Change the Color of Alarms

06/28/2024 8:30 am EDT

In Phoenix the alarm priority is hard coded to a certain color. In this document it will go through the steps on how to change the color of the alarm by the priority. These steps cover all versions of Phoenix.

Overview

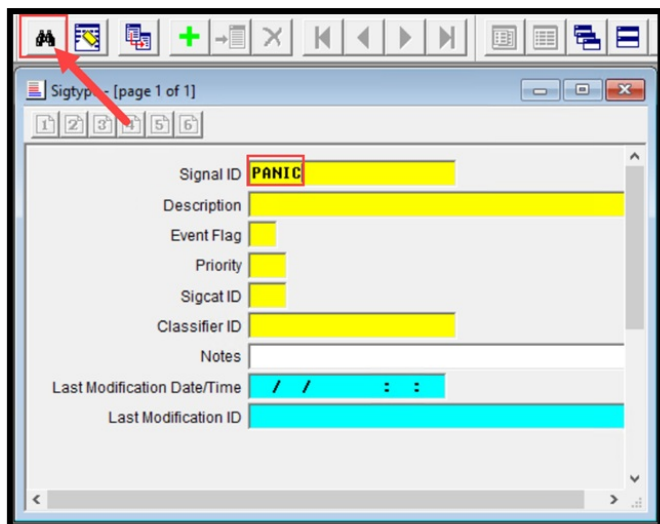

The color of the alarm is determined by the Priority of that SigType Alarm. Changes are made in the SigType Table. To change the color of a specific alarm, follow the steps below. The steps below assume the user performing them will have the proper permissions.

Steps:

- 1. Open Data Entry
- 2. Click on Tables - Click on Sigtype

- 1. Look up and find the Signal ID you need to change by typing in the full or partial name of the signal – then click on the Binoculars

1. Change the Priority to the correct corresponding color listed below

Priority Table Colors:

Priority	Color		Comment
0	Blue		Any non-signal related messages such as "There are aged events..." and "An event has moved from Wait to Pending."
1	Red		
2	Magenta		
3	Yellow		
4	Turquoise		
5	Green		
6 and above	White		Signals generated from a Reminder record will flash White but show Orange in the browser.

In the example: **PANIC** is **Priority 3** so the color will be **Yellow**. If the color is to be **Magenta** – Change the **Priority to 2** – Click on **Update**
