

Select Job Records from The Previous Day

09/23/2024 2:28 pm EDT

Issue:

We would like to be able to create a list of jobs each morning that were created on the previous day using a SQL Job.

Resolution:

The formula below will take the current date and subtract one day using the Creation_Date on the OE_Job records.

```
Select * From OE_Job
```

```
WHERE Creation_Date >= dateadd(day,datediff(day,1,GETDATE()),0)
```

```
AND Creation_Date < dateadd(day,datediff(day,0,GETDATE()),0)
```
