

Receiving an Error Trying to Update AP Aging Buckets (Internal)

10/14/2024 1:04 pm EDT

Issue:

When trying to update the Aging Setup we receive an error that the number of supplied vales does not match table definition.

Resolution:

The error can be caused by an added field. We have seen an issue where there is an additional field in the table called Column_Zero_Heading_OPT. If this field is present the error will be returned.

--- Check table for Column_Zero_Heading_OPT column ---

```
select * from AR_Setup_Aging
```

--- Remove the extra field ---

```
ALTER TABLE AR_Setup_Aging
```

```
DROP COLUMN Column_Zero_Heading_OPT
```
