

Setting Up Ajax Receiver within Manitou

12/20/2024 10:20 am EST

To set up an Ajax Receiver within Manitou, follow the below steps:

1. The customer has to have an XML Receiver License for each Ajax receiver they want to set up.
 2. If not already done, set up a new Receiver Type for the AJAX Receiver using the BOLD XML protocol.
 3. Then set up a new Receiver in each FEP being used for the Ajax Receiver. The customer will need to provide the IP address and Port (from Ajax) in order for Manitou and Ajax to communicate.
