

Shutdown SedonaSync Server Services

07/18/2025 11:13 am EDT

Customers can shut down each server service they are using instead of shutting down all of SedonaSync.

An example: If a customer's Email server is having any email issues, that server can be stopped by toggling the Email server status button to **OFF**. If the customer has more than one email server, this will be useful because they only have to shut down the service on this platform once, instead of shutting down more than one email service.
