Supplementary information

What is a stealth logger?

Stealth logger takes printer output of receiver data and adds to a database.

What if the site is UL compliant?

If customer is UL on prem they won't need Stealth Logger because Stealth Logger isn't TLS compliant. Vapor Paper should be installed instead.

How it is possible to identify the required output port?

For example, The Bosch D6600 would be connected to the Stealth Logger using the External Printer port on the back of the D6600 receiver which is COM4.

What is the process for cut over because the Manitou server isn't in the same room as the legacy server? For example, the Bosch output to the SIMS server is from comm to USB.

Connecting the Bosch D6600 receiver to automation or a stealth logger would go through a Digi box

How can the output from the DMP and Fronter receivers be captured for Stealth Server as they are IP?

(Answer for physical receiver) The DMP would have to be connected to the Stealth Logger using the serial printer port on the back of the receiver and go through a Digi Box. I'm not sure if the RSI Frontel receiver has an external printer port.

Effort and Process

On Prem

The installation takes 8 hours - This has been replaced by Vapor Paper for UL sites

Hosted

Not required for the cloud

Questions for the Customer

Question 1 - Is the customer UL on prem? If customer is UL on prem they won't need Stealth Logger because Stealth

Logger isn't TLS compliant.

Training

Training takes 10 minutes and can be completed by the System Consultant

- 1) How to run
- 2) How to look up history
