 48502 Warehouse endpoints.....4

SedonaAPI 2.0 Application Corrections4

 [CURRENTLY NONE]4

Special Upgrade/Installation Instructions.....4

Supported Environments4

SedonaWeb 2.0 Enhancements/Features **INTERNAL******

50989 Reference latest payment processing DLLs

Pulled latest payment processing DLLs into the reference library.

- PaymentProcessing.dll
- PaymentProcessing.Forte.dll
- PaymentProcessing.IntegraPay.dll
- PaymentProcessing.Processors.dll

SedonaWeb 2.0 Application Corrections **INTERNAL******

51513 Employee field displays employee id not name - 1.47.0 (Support test) BETA [00117230]

- 1) Corrected some html tags which were wrong.
- 2) Updated the Telerik nuget URL which needed updating anyway because the old URL was deprecated and will no longer function later this year.
- 3) Issue is that a newer version (2020...) of a Telerik nuget pkg was being pulled by nuget restore because the targeted version (2017...) was not available via the Telerik URL. The newer version was not compatible with other frameworks in use and was causing the web pages to not fully render, causing controls to not function as expected. For a workaround, we copied the 2017 version to a local repo and changed the nuget config to look there first. This now pulls the correct version and works as expected.

SedonaAPI 2.0 Enhancements/Features

47622 Inventory endpoints

We improved the validation for the add, update, and delete inventory endpoints. They also go through stored procedures like they should. The documentation for the Inventory model is available in your own local base endpoint: </help/index.html>.

47626 Manufacturer endpoints

We added GET, POST, PUT, and DELETE endpoints for manufacturer. The documentation for the Manufacturer model is available in your own local base endpoint: </help/index.html>.

47630 Part endpoints

We improved the validation for the part endpoints (POST, PUT, DELETE). They also go through stored procedures like they should:

- Complete overhaul of part validation, adding, updating, and deleting functionality.
- Added GET </api/CostingMethod> so a caller to POST/PUT </api/Part> knows how to populate the CostingMethod properties.
- Added GET </api/ManufacturerWarranty> so a caller to POST/PUT </api/Part> knows how to populate the ManufacturerWarranty properties.
- Added the KitParts property to the Part model. Previously there was no way to create a part that was a kit; update the parts in the kit; or see the parts in an existing part's kit.
- Added complete documentation to the following models seen in swagger:
 - [CostingMethod](#)
 - [KitPart](#)
 - [ManufacturerWarranty](#)
 - [Part](#)

The documentation for these models is available in your own local base endpoint: </help/index.html>.

47634 Part supplier endpoints

We created Part Supplier add/update/delete (POST, PUT, and DELETE) endpoints. The documentation for the PartSupplier model is available in your own local base endpoint: </help/index.html>.

47638 Product line endpoints

We added GET, POST, PUT, and DELETE endpoints for product line. The documentation for the ProductLine model is available in your own local base endpoint: /help/index.html.

48502 Warehouse endpoints

We improved the validation for the add, update, and delete endpoints for warehouse. They also go through stored procedures as they should. The documentation for the Warehouse model is available in your own local base endpoint: /help/index.html.

SedonaAPI 2.0 Application Corrections

[CURRENTLY NONE]

Special Upgrade/Installation Instructions

If your company uses SedonaWeb 2.0/SedonaAPI 2.0, IT will update the version at the same time as your SedonaOffice upgrade. This is to ensure compatibility with all modules using SedonaWeb 2.0/SedonaAPI 2.0.

.NET Framework 4.8 automatically uses TLS 1.2. TLS 1.2 must be the only TLS version Enabled in the Registry. TLS 1.0 and TLS 1.1 must be disabled. Verify they are disabled and TLS 1.2 is enabled.

Supported Environments

- This version of SedonaWeb 2.0/SedonaAPI 2.0 requires SedonaOffice version 6.2.0.17 or above.
- Server (where SedonaWeb 2.0 is installed) has Microsoft .NET 4.8 installed.
